EDUCATION

Darshan University

Expected: May 2028

Bachelor of Technology (B.Tech) in Computer Science & Engineering

- Current Cumulative Grade Point Average (CGPA): 7.96 / 10 (Semesters 1 & 2)
- Relevant Academic Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java/C), Database Management Systems (SQL), Computer Programming (C)

TECHNICAL SKILLS

- Programming Languages: Java, C
- Web Stack Technologies: HTML5, CSS3, Bootstrap Framework
- Relational Databases: MySQL / SQL Structured Queries(Currently learning) • Developer Tools: Git, GitHub, VS Code

TECHNICAL PROJECT

Incredible India Tourism Guide Web Application | *HTML5, CSS3, Bootstrap Framework, Git*

- Developed a multi-page interactive web application featuring custom navigation menus, structured travel directories, and media galleries.
- Utilized Bootstrap's mobile-first grid system to ensure seamless, responsive layout rendering across all mobile and desktop viewports.
- Styled components with custom CSS rulesets to create unique button focus states, thematic cards, and clean visual hierarchies.
- Tracked codebase version branches locally with Git and deployed the live platform publicly via GitHub Pages cloud hosting.

Data Structures & Terminal Game Engine Implementations | *C, MySQL/SQL*

- Engineered a terminal-based Anagram Game logic engine in C utilizing frequency- tracking arrays to validate random user inputs.
- Programmed procedural text-scrambling features using low-level dynamic memory seed values (srand/time) for distinct puzzle rounds.
- Constructed a real-time command-line interface using ANSI escape codes for custom colored text, scoring, and screen-clearing.
- Coded core sequential data structures (Linked Lists, Stacks, Queues) from scratch to master pointer and memory management.
- Formulated relational database schemas and executed custom SQL queries as part of academic database coursework.

ACADEMIC FOCUS & FOUNDATIONS

- Algorithmic Logic: Practicing data manipulation by implementing loops, conditional arrays, and string-parsing algorithms in C.
- Software Standards: Writing readable, optimized, and well-commented code structures within engineering laboratory coursework.
- Relational Databases: Studying fundamental database management structures to understand efficient data storage matrices.
